

RoundTable AI

Talk together. Decide together. Get it done.

- A mobile decision room for the whole group
- Shared Smart Stage, voting, approval and receipts
- Built by Shivam Mahendru for the Agora Voice AI Hackathon

Talk together. Decide together. Get it done.

The group planning problem

Every participant has different constraints

- Budgets, diets, travel time and availability conflict
- A chat thread makes the trade-offs difficult to compare
- RoundTable makes the brief and decision process visible

The screenshot displays the RoundTable AI interface. At the top, a header for 'Friday Fun Crew' indicates a 'Group outing · 3 demo participants' and a 'DEMO CALL' status. Below this, three participant cards are shown: 'You' (S), 'Priya' (P), and 'Ayaan' (A), each with a 'Camera off' status. A 'SMART STAGE' section shows 'Agent paused' with an 'Expand' button. A 'TRY A CONVERSATION TWIST' section offers options: 'Budget squeeze', 'Rain changes plans', and 'Leave early'. The main workspace, titled 'RoundTable', is labeled 'Shared workspace · simulated agent' and '1 / 7'. It features a progress bar and the heading 'One room. Different needs.' Below this, a chat log shows Ayaan asking, 'Can we keep it under ₹700 each?'. Two summary cards are displayed: 'BUDGET ₹700 / person' and 'TIME WINDOW 7:00–9:30 PM'. A 'Something to resolve' section states, 'Bowling exceeds Ayaan's budget. I'm comparing lower-cost plans.' A large green button reads 'Let RoundTable work'. At the bottom, a 'POWERED BY agora' logo is visible. The bottom navigation bar includes icons for 'Mute', 'Hand', 'Captions', 'Agent', and 'Leave'.

The complete guided journey

One goal becomes a reviewable decision

- Create → brief → search → comparison
- Voting → approval → local receipt
- Budget, rain and early-departure scenarios

The trade-offs, side by side

Ayaan: Can we keep it under ₹700 each?

Bowling + bites ₹760
18 min travel · Indoor · Vegetarian
Over budget — excluded

Paint + pizza ₹890
24 min travel · Indoor · Vegetarian
Over budget — excluded

Games café ₹620
31 min travel · Indoor · Vegetarian
Selected for the room vote

Agent recommends Games café: ₹620 each leaves ₹80 headroom and includes food and an activity.

People stay in control

The agent proposes; application state governs

- All three simulated votes must be recorded
- Host reviews the exact proposed action
- Agent pause, captions and activity log stay visible

Agora integration

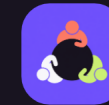

Real-time voice foundation in the native client

- RTC: microphone publication and agent audio
- RTM: live transcripts and agent state
- Agent Client Toolkit: lifecycle and state events
- FastAPI: short-lived tokens; start and stop sessions

Talk together. Decide together. Get it done.

Agora voice on Android

POWERED BY **agora**

The Android client uses Agora RTC for microphone and agent audio, RTM for transcripts, and the Agent Client Toolkit for conversation state.

Install the submission APK, open Me → Open Agora voice, enter your backend URL and connect. This browser preview demonstrates the Smart Stage and decision workflow.

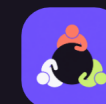

Live voice requires an enabled Agora Conversational AI project and server credentials. No live connection is simulated here.

[Back to RoundTable](#)

Conversational AI pipeline

Configured through the Agora Python SDK

- Deepgram STT → OpenAI model → MiniMax speech
- Voice activity detection and interruption configuration
- Metrics and errors enabled; credentials kept on server
- Live account and Android audio validation pending

Implementation and evaluation

A working mobile prototype with clear boundaries

- React Native + TypeScript; Android packaging workflow
- 17 Jest tests, TypeScript and web production build pass
- 2 backend tests pass; actual browser journey captured
- Group sync, live venues and external calendar are next
